

## SID 5 – Smarter Diagnostics. Zero Downtime.

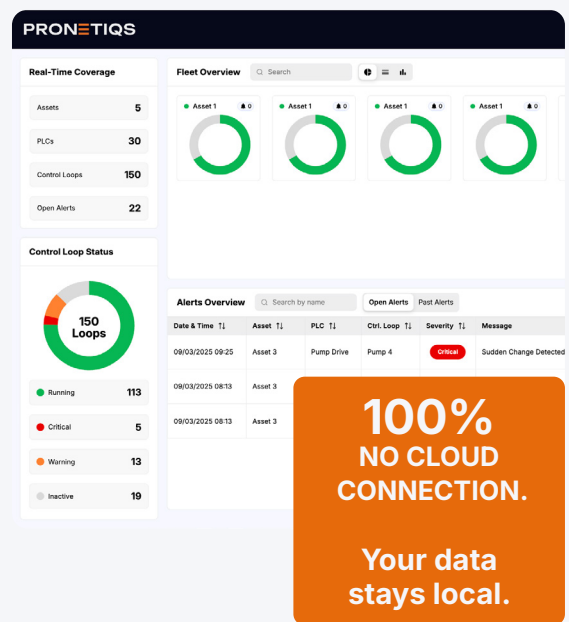

SID 5 is a powerful diagnostics software that monitors control loop behaviour of all your machines without the need for cloud connections or extra sensors. It passively collects data via OPC-UA/MQTT to deliver real-time insights helping you reduce downtime, prioritise maintenance, and keep operations running at peak performance.

### Key Features

- No cloud connection or additional sensors required.
- Passive data collection via OPC-UA / MQTT.
- Real-time loop status overview across all machines.
- Direct access to control loop tracking and alerts.
- Interactive Baliso Graph for intuitive live diagnostics.
- Actionable reports: Asset Alerts, Trends & Machine Overview.
- A full equipped diagnostic hub at entry-level prices.

### Why SID 5?

SID 5 gives you full insight of your factory's performance through a unified dashboard. Track live machine data, detect deviations early, and make fast, informed decisions. With customizable alert parameters and prioritization, SID 5 helps you refine your processes and avoid costly downtime.

### Who are we?

As a software and expertise powerhouse Pronetiqs offers over 50 years of expertise in diagnostics, improving the operational efficiency of industrial machines. Our range of support, consultancy and certified training services ensure your systems are robust and reliable.

### That's SID!
